Bittorrent

- How to test IP

How to test IP

Got to https://torguard.net/ and find "Check My Torrent IP".

It might be in the bottom of the page somewhere.

Download the turrent. You may just need the turrent link.

Once you start the download, it may not download but keep spinning like its fetching the turrent. Just click OK, and get it going. It will work.

When the turrent shows up, go down do the tracking tab on the bottom status area. It will show you the IP address of the turrent it got it from and also, the IP address that you are downloading on which is your current IP.
