How to test IP

Got to <https://torguard.net/> and find "[Check My Torrent IP](#)".

It might be in the bottom of the page somewhere.

Download the torrent. You may just need the torrent link.

Once you start the download, it may not download but keep spinning like its fetching the torrent. Just click OK, and get it going. It will work.

When the torrent shows up, go down to the tracking tab on the bottom status area. It will show you the IP address of the torrent it got it from and also, the IP address that you are downloading on which is your current IP.
