

Upload failed request entity too large - Troubleshooting Nextcloud

"Upload failed request entity too large"

If you have a proxy, go into the config file and change the "client_max_body_size" line. If that line isn't there, add it under the http section.

```
user www-data;
worker_processes auto;
pid /run/nginx.pid;
include /etc/nginx/modules-enabled/*.conf;

events {
    worker_connections 768;
    # multi_accept on;
}

http {

    ##
    # Basic Settings
    ##

    client_max_body_size 1000M; #(right here)

    sendfile on;
    tcp_nopush on;
    types_hash_max_size 2048;
    # server_tokens off;

    # server_names_hash_bucket_size 64;
```

```
# server_name_in_redirect off;
```

```
include /etc/nginx/mime.types;
```

```
default_type application/octet-stream;
```

I didn't have a line at all so I just put it in there.
