

Troubleshooting RAID

Setup: Our current RAID array with 5 drives in it is "md111". Its location is /dev/md111

Resize the blocks

```
resize2fs -f /dev/md111
```

Stop Array

```
mdadm --stop /dev/md111
```

Auto scan for arrays

```
mdadm --assemble --scan
```

Once the new mdadm.conf was ready, execute "sudo update-initramfs -u" This updates the conf file used by initramfs.

```
sudo update-initramfs -u
```
