

# SSL CertBot with Lets Encrypt

This runs in snap. You will need to install that first (if you don't have it already).

See if you have snap

```
`snap` or `snap -v`
```

Install a certificate bot REPO for "lets encrypt"

Go to: <https://certbot.eff.org/lets-encrypt/>

Make sure Certbot is not installed first:

```
sudo apt-get remove certbot
```

Run Auto Cert

```
sudo certbot --nginx
```

Test Automatic renewal

```
sudo certbot renew --dry-run
```
